

Jonathan Pizzurro Junior iOS & Automation Developer

Caracas, Venezuela | +58 424-149-4980 | jonathanpizzurro@gmail.com | jonathanpizzurro.vercel.app

Professional Summary

Systems Engineering student at Universidad Metropolitana, close to graduation, specialized in iOS development with Swift and UIKit, multichannel chatbots with Node.js and process automation with Python. I have built and deployed production chatbots for WhatsApp, Instagram and Facebook using the official Meta API together with Railway and Supabase—including generative AI features for design and imagery—, native iOS applications with UIKit and NFC, and cross-platform projects with React Native and Firebase. Top 10 finalist in the first Vibecoding hackathon held in Venezuela. I apply AI development tools strategically to accelerate delivery while keeping full technical judgment over the code.

Key Skills

iOS Development | Swift | UIKit | Auto Layout | Core Data | AVFoundation | Xcode | React Native | Expo | Node.js | Python | Selenium | Firebase | Supabase (PostgreSQL) | REST APIs | Webhooks | Meta API (WhatsApp Business, Instagram, Messenger) | Claude API | OpenAI API | Whisper (OpenAI) | Railway | Web Scraping | Git | Figma | Prompt Engineering | Process Automation | Client-Server Logic | Problem Solving | Collaborative Work |

Professional Experience

Multichannel Chatbot Developer, Lowtech | Jan 2026 – Present

Technology company focused on conversational solutions and automation. Responsible for the development of an informational chatbot for a client in the hospitality sector, available 24/7 on WhatsApp, Instagram and Facebook.

- Integrated the official Meta API (WhatsApp Business, Instagram and Messenger) through webhooks, unifying three communication channels into a single automated service.
- Built a Node.js server on Railway connected to Supabase (PostgreSQL), using Claude Haiku (Anthropic) as the conversational engine to deliver contextual answers.
- Added voice message processing with Whisper (OpenAI), allowing the bot to answer audio inquiries on the three channels.

Sales Chatbot Developer with AI Design Generator, Lowtech | Jul 2026 – Aug 2026

Multichannel sales chatbot for a client, with an integrated AI design generator that creates garment design sketches based on customer requests, plus an admin dashboard for messages and inventory.

- Built the chatbot in Node.js with Claude (Anthropic) as the conversational engine, integrated via the Meta API (WhatsApp, Instagram, Messenger).
- Implemented AI-generated design sketches using the OpenAI API, based on customer requests.
- Developed an admin dashboard connected to Supabase (PostgreSQL) to manage conversations and inventory.

Python and Automation Developer, BankBot P2P, Independent Project | Dec 2025 – Mar 2026

Automation bot developed with Python and Selenium that manages the complete buying and selling cycle on Binance P2P, from order detection to the execution of real bank transfers.

- Automated the detection of incoming orders, the validation of bank account holder names and the execution of transfers through banking APIs, removing repetitive manual steps from the operation.
- Implemented web scraping with CSS selectors defined for each stage of the flow (login, amount entry and confirmation), keeping the bot stable across the different screens of the platform.
- Designed a terminal execution with detailed logs and automatic screenshots for auditing purposes, allowing every transaction to be traced and reviewed step by step.

React Native Developer, Subástalo, Independent Project | Oct 2025 – Dec 2025

Venezuelan auction application that connects buyers and sellers in a secure and verified environment, developed with React Native, Expo and Firebase. Project completed and not published.

- Developed cross-platform interfaces with React Native and Expo, reusing a single code base for iOS and Android.
- Integrated Firebase for secure user authentication and a real-time database that keeps bids synchronized between participants.

- Designed the auction flows and the data structure around trust and transparency, including verification between buyers and sellers.

(Continued on page 2)

Back Office Analyst, SSInsurance, United States | Feb 2024 – Jun 2026

Insurance brokerage based in the United States. Responsible for back office operations, including policy and payment control, daily communication with insurers and clients in English and Spanish, and the development of internal automation to support the workflow of the area.

- Developed an automation with Python and web scraping that executes payments directly on the insurance companies' platforms, replacing a manual and repetitive process.
- Reviewed and validated policies and payment records, keeping client information consistent, accurate and up to date.
- Handled calls and follow-up with the United States insurance market, mainly in English and also in Spanish, to resolve issues related to policies, coverage and payments.

iOS Developer, Pagoland, Independent Project | Mar 2024 – Aug 2025

iOS application designed to modernize payments in schools through NFC technology, replacing cash in the school cafeteria with secure contactless transactions. Developed in Swift with UIKit and Auto Layout. Project completed and not published.

- Built adaptive iOS interfaces with UIKit and Auto Layout, ensuring a consistent experience across different screen sizes.
- Implemented contactless payments through NFC, focused on transaction security and on reducing waiting times at the cafeteria.
- Defined user flows oriented to speed and ease of use for students and school administrators.

iOS Developer, S.A.E.C., Academic Project, Universidad Metropolitana | Jun 2024 – Dec 2024

iOS application for students of Universidad Metropolitana that records academic progress and displays performance statistics by term. Developed in Swift with UIKit and Auto Layout. Project completed and not published.

- Developed the flows to register academic progress and to consult quarterly performance statistics.
- Designed the visualization of results so that students can identify trends and plan the subjects of the following term.

Education

Systems Engineering, Universidad Metropolitana, Caracas, Venezuela | Sep 2021 – Sep 2026

Languages

Spanish (native), English (professional working proficiency, used daily for over two years with insurers and clients in the United States)

Achievements and Additional Experience

Participant, First Vibecoding Hackathon in Venezuela

- Reached the Top 10 of the competition by developing a functional product within the established time limit, working under pressure and presenting the technical solution to the jury.

Technical Keywords

Swift · UIKit · Auto Layout · Constraints · Core Data · AVFoundation · Xcode · Interface Builder · React Native · Expo · Firebase · NFC · Node.js · Supabase · PostgreSQL · Railway · Meta API · Webhooks · Whisper · OpenAI API · Python · Selenium · Web Scraping · Git · Figma · Visual Studio · Cursor · Microsoft Copilot · Claude · ChatGPT · Prompt Engineering · Basic Flutter

Professional Focus

I am looking to grow as a junior developer in teams where I can contribute energy, fast learning and practical judgment. My main strength is turning product ideas into functional interfaces, learning new technologies quickly and using modern tools to deliver mobile and automation solutions with better speed and quality.
